## Sodium Silicate Market India Scenario

Presentation by Primary Information Services www.primaryinfo.com mailto:primaryinfo@gmail.com Sodium silicates are made from soda ash and high quality silica sand/ quartz. The alternate process is based on caustic soda and silica sand. Rice husk ash is also used as source of silica

Sodium silicate is a key source of reactive silica that has high demand in numerous application industries, including detergent, rubber, food and beverage, and paper and pulp. Increasing demand for other derivatives such as silica gels and silica sols in applications, including paints and coatings, plastics, and ink

#### Detergents are one of the key applications of the substance and they accounted for the Largest market share

Small Production Capacity Many Companies – Around 200 Manufacturers, Importers, traders

# Companies with Production capacity of 12000 MTPA

Investment upto INR 50 MILLIONS / per company

#### QUALITY AND STANDARDS : IS 381:1995 IS 6773:1978 IS 9601:1980

Silica sand and Sodium carbonate are the two principal raw materials used in the manufacture of sodium silicate

#### **Pollution Control**

Both raw materials, silica sand and sodium carbonate are purchased in the ready to use powder form. Only mixing of these materials in appropriate proportions is done in the batch house in the plant. Hence, dust collectors and exhaust systems are recommended in the batch house. In the melting operation, chimney of sufficient height, say 60 to 75 feet, is recommended to exit the gases of combustion, carbon dioxide from the soda ash and also volatilization of alkali oxides.

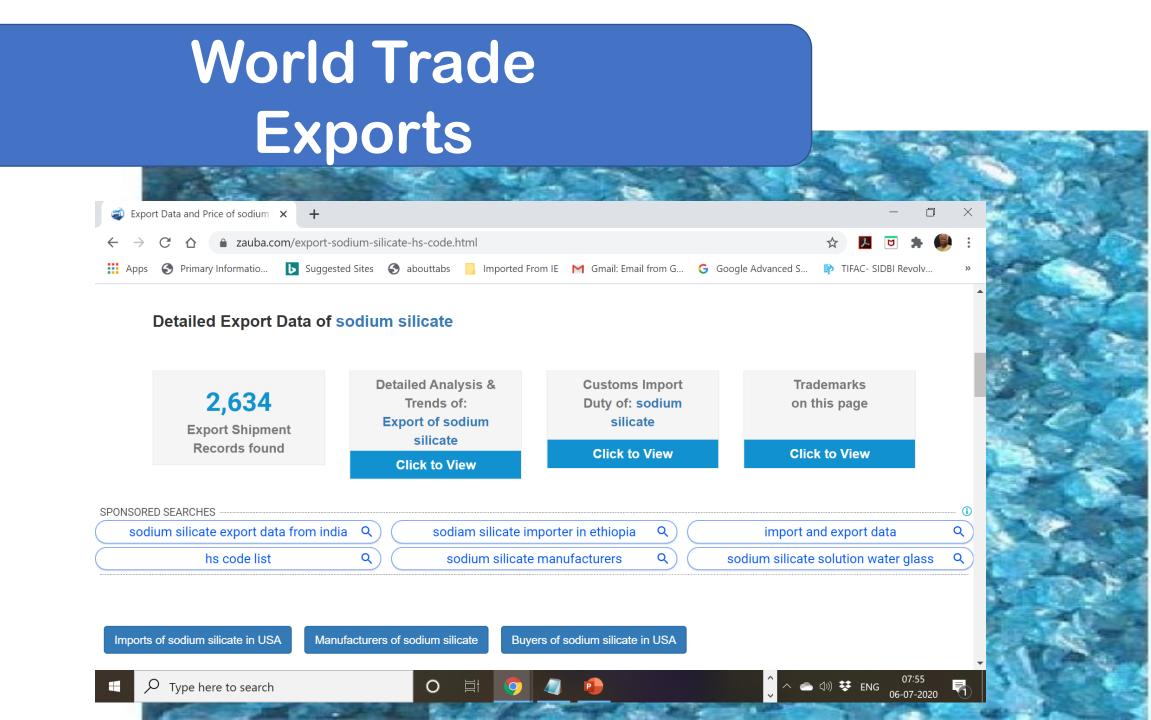

### **Energy Conservation**

Modern glass tank furnace is recommended using furnace oil, LDO or gas firing systems. Combustion systems, for example, burners, blowers, preheating of fuel will depend on the fuel selected

## **EXPORT DATA**

## Regulations Domestic International

IS 381 (1995): Sodium silicate - Specification Sodium silicate, liquid shall be thick, viscid, translucent mass of water, white or slightly grey colour. 5.1. 2 Sodium silicate, solid shall be in the form of glassy lumps of pale grey or green colour. To meet the special requirements, the particle size shall be as agreed to between the purchaser and the supplier.

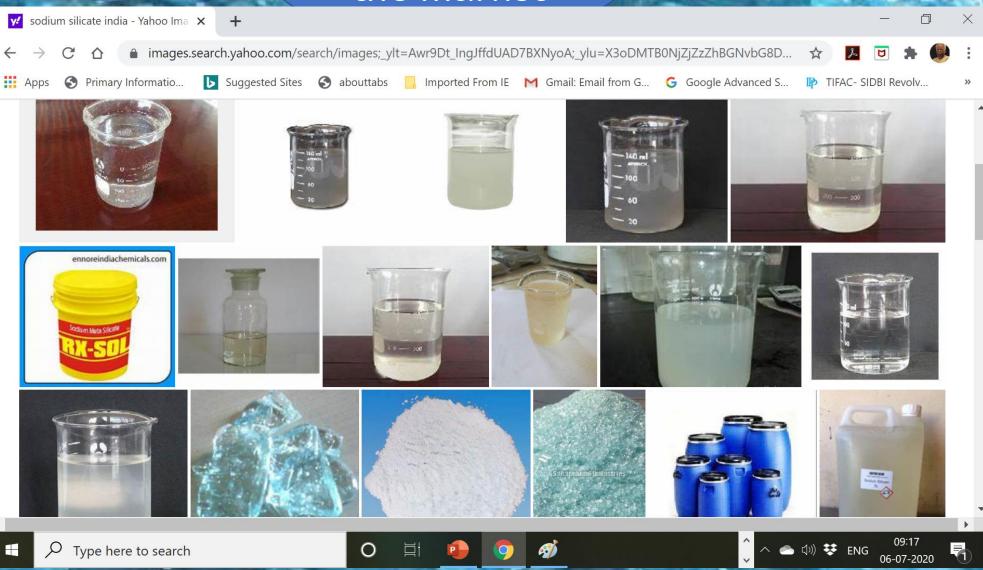

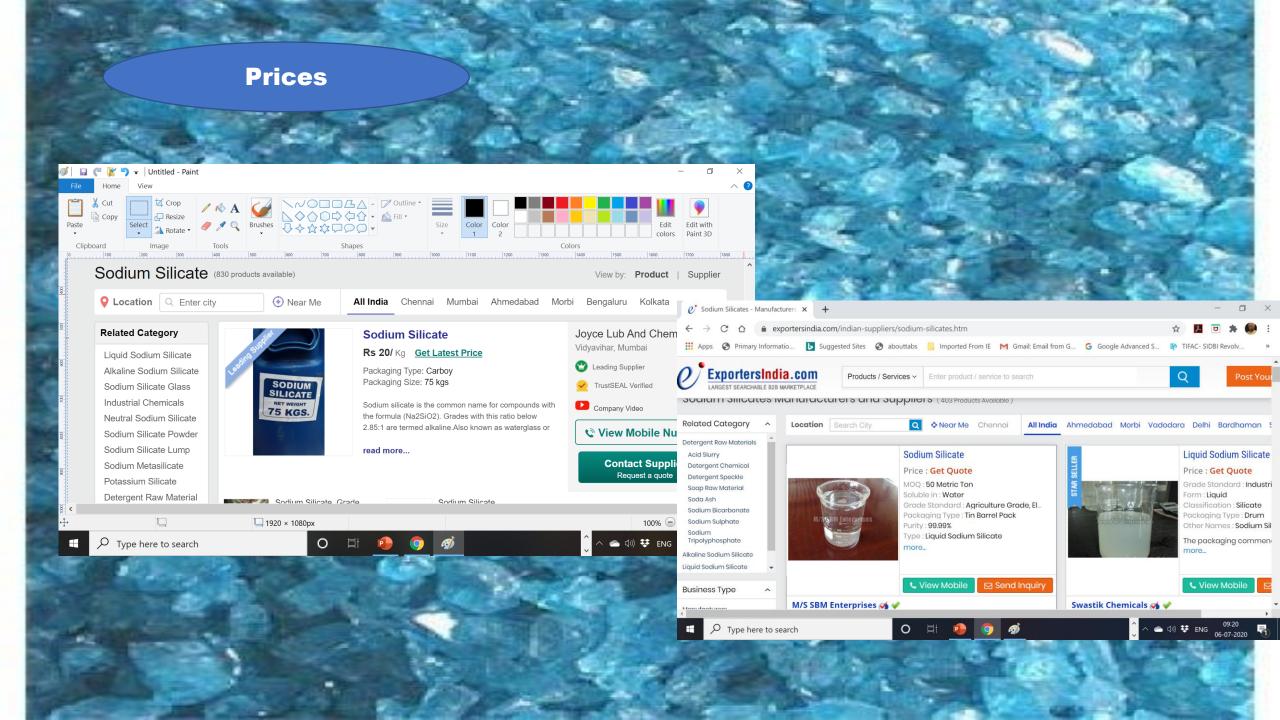

MEIBAO INDUSTRIAL TECHNOLOGY CO,LTD

# **CIECH Group**

Company in Poland Major Player GRACE Talent | Technology | Trust<sup>™</sup>

Built on talent, technology, and trust, Grace is a leading global supplier of specialty chemicals.

Our two industry-leading business segments—Catalysts Technologies and Materials Technologies—provide innovative products, technologies, and services that enhance the products and processes of our customers around the world.

Sodium silicates are used in industry as adhesives, detergents, ingredients in cleaning compounds, cements, binders, and unique coatings, as well as coagulant aids, anticorrosives, catalyst bases, deflocculants, chemicals, zeolites, etc.

The different properties and functional characteristics of soluble silicates can be used to efficiently and economically solve many problems arising in industrial and chemical processes.

# Precipitated Silica

#### **Derivative of Sodium Silicate**

Production of One ton of Precipitated Silica requires approximately one ton of Sodium Silicate

#### Silica GEL is derivative of Sodium Silicate

#### Zeolite is a derivative of Sodium silicate

## Sodium Silicate usage as Commodity

Paper Industry, Foundry, Minerals, Steel Industry Oil & Gas, Thermal Power plants, Coal mines, Ceramic Industry, Electrical Generation & Transmission
